

Mike Frame is the Deputy Center Director for the Center for Biological Informatics, U.S. Geological Survey. He is responsible for geospatial, informatics, and technology operations and oversight at the Center. Mr. Frame is also the technology manager and lead developer for the National Biological Information Infrastructure (NBII) (<http://www.nbi.gov>). The NBII helps people make better decisions and provides access to the Nation's biological resources.

Prior to joining USGS, Mr. Frame was the Deputy Director of Information Systems Development with the Department of Energy's Office of Scientific and Technical Information. While in this role, he was responsible for the design and implementation of a DOE wide research and development system and other information and technology efforts.

Mr. Frame is a U.S. representative on several international efforts relating to biological informatics. He is also one of the technical advisors on the USGS Gateway to Earth project. Additionally, he serves on the Energy and Environmental Research Information Center Advisory Board and several other biological informatics activities.

He earned his bachelor's in Electrical and Computer Engineering and his master's in Industrial Engineering/Information Systems from the University of Tennessee.
